SELECTED

M. KLITGORD
Lima, New York

CAULIFLOWER

Early Snowball Selected. This strain is known as the standard Snowball, a splendid variety for early outdoor use, as well as forcing in frames, it is also good for fall planting. Call for my Snowball and you get the earliest, most dwarf, surest header and snow-white Cauliflower.

Early Dwarf Erfurt. An excellent sort very similar to the Snowball, but a little later. One of the best for general cultivation.

Dry Weather. Second early, extra large, compact, pure white heads, tall foliage protecting from unfavorable weather conditions. The best variety to use in localities subject to dry, warm seasons.

BEST EARLY AND SECOND EARLY CABBAGE WITH ROUND HEADS

Golden Acre. Quite similar to the popular Copenhagen Market, but smaller and earlier. A uniform, tightly folded, and well balanced head of superb quality.

Extra Early Round. (Copenhagen Type.) This new cabbage is very early, heads are solid as a rock, weight from 5 to 8 lbs. It is surely the very earliest of all Round Cabbage, and will stand long after being ready to cut without splitting. Give Extra Early Round a trial for your first early crop. Some of my customers have grown this cabbage in 60 days for car-load shipments as early as August 2nd. None earlier, none better.

Copenhagen. A quality variety with round heads averaging about 8. lbs. in weight. They are very solid and have a small core. The plants are short-stemmed, the heads being produced almost on the surface of the ground its sturdy growth is conspicuous. The heads show no tendency to burst open, but remain fresh and firm for a long time. If the harvest is delayed, the heads will increase in weight. A most productive variety, attractive, and always tightly folded. This strain is one of the most popular Copenhagen for early Kraut Cabbage.

Marion Market. Yellow resistant strain of Copenhagen Market. It is larger and coarser in plant, and not so early nor so uniform as Copenhagen, but with the round head and crisp tenderness of the parent cabbage.

Glory of Enkhousen. A second early, sure-heading variety of large, solid heads. A compact grower allowing close planting. Especially desirable for market growers to set out in July after the early spring crops are harvested. This strain of Glory is a very heavy yielder, customers often reporting yields of 30 tons to the acre, and is one of the most popular cabbage used for Kraut making in N. Y. State.

WINTER CABBAGE

My Danish Selected Short Stem. This selected strain produces a large round solid head, of extra good quality, the outer leaves having a purple tint, the small veins showing a very rich color. This is an extra fine strain, and the produce dealers' favorite cabbage. I have a private grower in Denmark, that grows only a limited amount of this seed each year. This strain will yield more tons of cabbage per acre, than any other strain; without exception.

Penn State Ballhead. This strain, originated by Professor Meyers of the Penn State College. The heads are distinctly large, firm and heavy, inclined to be flat, has an attractive bright green color, the stem is short. The strain is about a week later than Danish Ballhead.

Danish Ballhead Short Stem. One of the very best winter sorts and one of the most hardy; heads round, deep and very solid. It keeps perfectly in storage.

Wisconsin Hollander No. 8. Yellows resistant of the Danish Ballhead type, the plants are larger, foliage is very deep green. Where conditions are favorable will produce a very large yield.

Early Red (Large) New. The heads of our Early Large Red cabbage become as solid and hard as the heads of the late varieties. It matures much earlier, and if properly stored, will keep all winter. The heads are round very solid, the color is dark red.

We highly recommend this new strain.

Red Danish Stonehead. The plants are strong and compact, producing dark red, round, solid heads. The red color extends through to the center of the head.

HEADQUARTERS OF STANDARD VARIETIES OF SELECTED ONION SEED

Our seed is used by many large critical growers of Onions.

Early Yellow Globe. This is the earliest of all yellow Onions, true to name, globe shaped with bright beautiful yellow color, the skin is very thick, it is a fine keeper in storage. Our strain is superior to any other offered.

Brigham Yellow Globe. This new and very popular Onion is an improvement of the original strain offered. This is a great yielder with a heavy thick dark yellow skin, clear white flesh. It is the very best Onion for storage and can not be equalled. One large grower in New York State planted 100 acres of this strain and produced about 170 carloads. Beware of inferior seed offered at low prices, our stock is large and will cover your needs. WE HIGHLY RECOMMEND OUR STRAIN.

Southport Yellow Globe. A great yielder, fine keeper, bulbs large globular, skin deep orange-yellow. This onion matures a little later than Yellow Globe Danvers.

Special Yellow Globe. A superior strain of Yellow Globe for late crop. It is a large size onion of excellent keeping quality, very solid with a small neck. The color is golden brown.

Yellow Globe Danvers. (Squire's Strain.) Medium early. This is an old standard Onion, very popular; earlier than Southport. Uniform in shape, good color true to name, and of fine keeping qualities.

Ohio Yellow Globe. The bulbs are oblong globe shape, a trifle flattened at the base, skin pure deep yellow, flesh hard and firm.

Southport Red Globe. The bulbs are large globe shaped, skin is thick, very deep purpish red. This strain is selected for its fine qualities, and is a good yielder.

Southport White Globe. The most popular white onion, it has a fine globe shape, skin clear white, flavor is excellent, a good keeper.

Ebenezer or Japanese. Produces excellent sets of extra fine keeping quality, which planted in the spring produce early mature onions for market. Bulbs are yellow, rather more flat than Globe, very firm and hard.

Sweet Spanish (Riverside Strain). For your garden use this strain of large sweet onions, running about 4 inches in diameter, true globe shaped, very mild. flesh is firm, and the skin deep yellow.

Beets. Detroit Dark Red. In this strain we are offering you something exceptionally fine. The outer skin is dark, inside flesh is very dark blooded. Tops are small.

Carrots. Chantenay half long. Red core Chantenay, Danvers half long. Nantes & Hutchinson.

Lettuce. White Boston. Is very firm and of high quality, with light green leaves, and is ready to harvest about 10 days before Big Boston. We recommend this strain highly,

ORDER EARLY
